

## A B S T R A C T

5           The invention relates to a package (1) comprising at least  
two opposite walls (3, 5) which are bonded together along a  
longitudinally extending bonding seam (16, 17). Each wall (3, 5)  
comprises at least two bonded-together wall members (6, 7; 8, 9), which  
are folded onto each other about a fold line (10, 11), wherein parts (26,  
10 27) of the walls (3, 5) positioned on either side of the wall members (6,  
7; 8, 9) can be moved away from each other in directions (P1, P2)  
extending parallel to the longitudinal direction of the bonding seam (16,  
17), wherein the opposite wall members (6, 7; 8, 9) can be moved apart,  
15 bounding an opening that gives access to a space present inside the  
package (1).
